

Package Structure

	<ul style="list-style-type: none">● Config : CORS 처리 부분(빌드 시 제거)● Controller<ul style="list-style-type: none">- UserAccountController(REST, @RequestMapping("/user"))● JWT<ul style="list-style-type: none">- Login Service 구현을 위해 Token 발급 및 세션 관리● Model<ul style="list-style-type: none">- Mapper(DAO)- Service- UserAccount(DTO, VO)
---	---

Dependency

<pre><!-- LOMBOK --> <dependency> <groupId>org.projectlombok</groupId> <artifactId>lombok</artifactId> </dependency> <!-- JWT --> <dependency> <groupId>org.springframework.boot</groupId> <artifactId>spring-boot-starter-security</artifactId> </dependency> <dependency> <groupId>io.jsonwebtoken</groupId> <artifactId>jjwt-api</artifactId> <version>0.10.7</version> </dependency> <dependency> <groupId>io.jsonwebtoken</groupId> <artifactId>jjwt-impl</artifactId> <version>0.10.7</version> <scope>runtime</scope> </dependency> <dependency> <groupId>io.jsonwebtoken</groupId> <artifactId>jjwt-jackson</artifactId> <version>0.10.7</version> <scope>runtime</scope> </dependency></pre>	<ol style="list-style-type: none">1. LOMBOK<ul style="list-style-type: none">A. DTO 편의성2. JWT – JSON Web Token<ul style="list-style-type: none">A. Login Service Manager3. 추가한 소스(pom.xml)
--	--

Properties

```
# JWT
jwt.secret=ssafy.final.project.moneyhouse@access.key
```

주의 표시 무시 -> Java(com.moneyhouse.jwt.SecurityJavaConfig)에서 읽는 값

기타 mybatis, port 설정은 동일
